

Model CX300-Mini

Mini Dispatcher For Airwave CCI ports without an ICCS

- Ambulance
- Police and Fire Brigades
- Security and Public Safety
- First Line Responders
- Utilities

CX300-Mini is a mini ICCS like dispatcher with no central equipment other than an optional shared data server should CADI and SDS be required. Otherwise access to communication services is provided by direct connection to the Airwave Service CCI ports. This means each console is a standalone unit able to communicate with Airwave terminals with out the overhead of complex and expensive ICCS central equipments. The CX300-Mini operator is equipped with personal computer and a touch screen and the CX300-Mini software. The CX300-Mini is customisable for special applications if required and can be upgraded to make use of our port pooling switch or to a full ICCS .
